

SARAN V

Artificial Intelligence & Machine Learning Student | Python & Machine Learning Developer

Chennai, Tamil Nadu, India | +91 9150672123 | saranvs900@gmail.com | linkedin.com/in/saran-v204152328 | github.com/saranvs900-rgb

CAREER OBJECTIVE

Artificial Intelligence & Machine Learning undergraduate (Class of 2028) with hands-on experience building 5+ Python, Machine Learning, and NLP projects, including a resume-screening system, a computer-vision traffic violation detector, and a real-time face recognition attendance system. Seeking an internship or placement role to apply machine learning, Python development, and problem-solving skills to real-world products.

EDUCATION

Jeppiaar Engineering College — Chennai, Tamil Nadu

Expected Graduation: 2028

Bachelor of Engineering (B.E.), Artificial Intelligence & Machine Learning

TECHNICAL SKILLS

- Programming Languages: Python
- Machine Learning: Supervised Learning, Model Training & Evaluation, NLP, Computer Vision
- Web Technologies Basics: HTML, CSS
- Databases: Basic SQL
- Tools & Platforms: Git, GitHub, Visual Studio Code
- Core Strengths: Problem Solving, Quick Learning, Team Collaboration, Communication, Leadership, Time Management

PROJECTS

AI Resume Screening System

Jan 2026 – Feb 2026

- Built an AI-powered resume screening tool in Python using NLP techniques to match 100+ resumes against job descriptions automatically.
- Reduced manual resume review time by an estimated 40% by automating keyword and skill-based candidate shortlisting.
- Improved shortlisting accuracy by extracting structured features from unstructured resume text using NLP preprocessing pipelines.

Traffic Violation Detection System

Oct 2025 – Dec 2025

- Developed a Python and Machine Learning based computer vision system to detect traffic rule violations from images and video, achieving approximately 90% detection accuracy on test footage.
- Processed and analyzed 200+ image and video samples to flag violations such as signal jumping and lane crossing.
- Designed the system architecture to support real-time smart traffic monitoring applications.

Iris Flower Classification

Aug 2025

- Built and trained a machine learning classification model in Python, achieving over 95% accuracy on the Iris dataset.
- Performed data preprocessing, feature scaling, and an 80/20 train-test split across 150 data samples.
- Evaluated model performance using confusion matrix, precision, and recall metrics.

Real-Time Face Attendance System

Apr 2025 – May 2025

- Developed an automated attendance system in Python using real-time facial recognition, achieving over 95% recognition accuracy.
- Automated attendance logging for a class of 50+ students, cutting manual attendance time by roughly 5 minutes per session.
- Stored and managed attendance records automatically in a structured local database.

TECHNICAL PRESENTATION

Production-Ready RAG (Retrieval-Augmented Generation) System

Feb 2026

- Delivered a technical seminar to 60+ peers on the architecture and workflow of production-ready RAG systems.
- Explained Vector Databases, Embeddings, Retrieval pipelines, and Large Language Models (LLMs) to a technical audience.
- Demonstrated how Retrieval-Augmented Generation improves AI response accuracy by grounding LLM outputs in external data.

CERTIFICATIONS

- NPTEL — Online Certification Course, 2026
- Tech Quiz — INFO NEXUS 2K26, 2026
- Pitchathon Program — Completion Certificate, 2026

LEADERSHIP & ACTIVITIES

Volunteer, The Glitch (Bug Hunt) — Jeppiaar Engineering College Symposium

Mar 2026

- Co-organized a technical bug-hunting competition for 80+ participants, managing event logistics and rules.
- Coordinated participant registration and provided real-time technical support throughout the event.

Participant, Pitchathon & Tech Quiz — INFO NEXUS 2K26

Feb 2026

- Pitched an original technical concept to a panel of judges in a competitive pitchathon among 30+ teams.
- Placed among the top participants of a technical quiz testing applied CS and AI knowledge among 50+ competitors.
